This user guide supports the Evaluation kit for the FL7701. It should be used in conjunction with the FL7701 datasheet as well as Fairchild's application notes and technical support team. Please visit Fairchild's website at www.fairchildsemi.com.

1. Introduction

This document describes the proposed solution for a universal-input 2.4W LED ballast using the FL7701. The input voltage range is $90V_{RMS} - 265V_{RMS}$ and there is one DC output with a constant current of 85mA at $28V_{MAX}$. This document contains general description of FL7701, the power supply specification, schematic, bill of materials, and the typical operating characteristics.

1.1. General Description

The FL7701 LED lamp driver is a simple IC with PFC function. The special "adopted digital" technique automatically detects input voltage condition and sends an internal reference signal, resulting in high power factor. When an AC input voltage is applied to the IC, the PFC function is automatically enabled. Otherwise, when a DC input is applied to the IC, the PFC function is automatically disabled. The FL7701 does not require a bulk capacitor (electrolytic capacitor) for supply rail stability, which can significantly affect LED reliability.

1.2. Key Features

- Digitally Implemented Active PFC Function
- Built-in Self-Biasing HV Startup Circuit
- Application Input Range: $80V_{AC} \sim 308V_{AC}$
- AOCP Function with Auto-Restart Mode
- Built-in Over-Temperature Protection
- Cycle-by-Cycle Current Limit
- Current-Sense Pin Open Protection
- Low Operating Current: 0.85mA (Typical)
- Under-Voltage Lockout with 5V Hysteresis
- Programmable Oscillator Frequency
- Programmable LED Current
- Analog Dimming Function
- Fixed Soft-Start Function
- Precise Internal Reference: $\pm 3\%$

1.3. Internal Block Diagram

Figure 1. Internal Block Diagram

Pin Descriptions

Pin	Symbol	Description
1	CS	Current Sense. Limits output current, depending on the sensing resistor voltage. The CS pin is also used to set the LED current regulation.
2	OUT	Output. Connects to the MOSFET gate.
3	VCC	Supply Voltage. Supply pin for stable IC operation; ZCD signal detection used for accurate PFC function.
4	RT	Resistor. Programmable operating frequency using an external resistor connected to this PIN and the IC has fixed frequency when this pin is left open or floating.
5	ADIM	Analog Dimming. Connects to the internal current source and can change the output current using an external resistor. If ADIM is not used, connect a 0.1μF bypass capacitor between ADIM and GND.
6	GND	GROUND. Ground for the IC.
7	NC	No Connection
8	HV	High Voltage. Connect to the high-voltage line and supply current to the IC

2. General Specifications for Evaluation Board

All data for this table was measured at an ambient temperature of 25°C

Table 1. Summary of Features and Performance

Description	Symbol	Value	Comments
Input Voltage Range	$V_{IN,min}$	90V	
	$V_{IN,nom}$	220V	
	$V_{IN,max}$	265V	
AC Input Frequency	$f_{IN,min}$	47Hz	
	$f_{IN,max}$	64Hz	
Output Voltage/Current	V_{OUT}	28V	Note 1
	I_{OUT}	85mA	
Output Power	Output Power	2.41W	Note 2
Efficiency		>78%	At full load
Temperature	T_{FL7701}	< 71.5°C	At full load (all at open frame, room temperature / still air)
	T_{MOSFET}	< 59.5°C	
	$T_{INDUCTOR}$	< 57.5°C	
PCB Size			20mm (width) x 32mm (length) x 13mm (height)
Initial Application			LED bulb

Notes:

1. The output current has I_{LEDPK} ripple. To reduce ripple current, use a large electrolytic capacitor in parallel with the LED. Ensure the capacitor voltage rating is high enough to withstand an open-LED condition or use a Zener diode for protection.
2. The output power is not equal to the apparent power due to the slight phase shift between the output voltage and current.

1	R5	RC1206JR-073RL	3.0R	Resistor, SMD, 1/4W, 1206	Yageo	RCS

7. Test Condition & Test Equipment

Evaluation Board	FEBFL7701_L30U003A
Test Date	2012.01.19
Test Temperature	T _A = 25°C
Test Equipments	AC Source: PCR500L by Kikusui Power Meter: PZ4000 by Yokogawa Oscilloscope: Waverunner 64Xi by Lecroy EMI Test Receiver: ESCS30 by ROHDE & SCHWARZ Two-Line V-Network: ENV216 by ROHDE & SCHWARZ Thermometer: CAM SC640 by FLIR SYSTEMS LED: EHP-AX08EL/GT01H-P03 (3W) by Everlight

8. Test Waveforms

8.1. Typical Waveforms: Startup

Figure 8 through Figure 11 show the typical startup performance at different input voltage conditions. When AC input voltage is applied to the system, the FL7701 automatically operates in AC Mode after finishing an internally fixed, seven-cycle, soft-start period. Figure 10 and Figure 11 show the soft-start characteristics when a DC input voltage is applied.

Figure 11. Soft-Start Characteristics, DC Mode, 200V_{DC}

8.2. Operating Frequency & Minimum Duty

The programmable switching frequency is between 20kHz ~ 250kHz, determined by selecting the RT resistor value. If no RT resistor is used (RT pin OPEN), the FL7701 default switching frequency is set to 45kHz. The maximum duty ratio is fixed below 50% and has a fixed minimum typical on-time of 400ns. There are two crucial points to design properly. The first is consideration of the minimum duty ratio at minimum input voltage because the FL7701 is limited to 50% duty ratio. The second consideration is minimum on-time at maximum input voltage condition. The FL7701 cannot control output power when the operating conditions are such that the required on-time is less than the 400ns minimum on-time.

CH1: V_{CC}, CH2: V_{DRAIN}, CH3: V_{LED}, CH4: I_{LED}

Figure 12. Operating Frequency & Minimum Duty

8.3. Typical Waveforms: Steady State

Figure 13 through Figure 22 show the normal operation waveform by input voltage & input frequency. The output voltage and current maintains a certain output level with 120Hz ripple, as shown in the test results in Table 2.

Table 2. Output Characteristics by Input Voltage & Frequency

	47Hz		64Hz	
	V _{LED(RMS)}	I _{LED(RMS)}	V _{LED(RMS)}	I _{LED(RMS)}
90V_{AC}	27.91V	84.45mA	27.90V	84.58mA
110V_{AC}	27.99V	84.41mA	28.02V	84.49mA
180V_{AC}	28.13V	84.94mA	28.10V	84.86mA
220V_{AC}	28.12V	85.66mA	28.14V	85.77mA
265V_{AC}	28.17V	87.05mA	28.13V	87.05mA

Figure 23 and Figure 24 show the open-load condition test method and result. When the LED disconnects from the system, the IC cannot operate because the HV pin is disconnected.

Figure 23. Open-Load Condition Test

CH1: V_{CC} , CH2: V_{DRAIN} , CH3: V_{LED} , CH4: I_{LED}

Figure 24. Test Results of Open-Load Condition

8.5. Typical Waveforms: Abnormal Mode (Inductor Short Condition)

Figure 25 and Figure 26 show the test method and result of an inductor short condition. The FL7701 uses an abnormal over-current protection (AOCP) function, limiting the current on RCS in the event of an inductor short condition.

Figure 25. Inductor Short Condition

CH1: V_{CS} , CH2: V_{DRAIN} , CH3: V_{LED} , CH4: I_{LED}

Figure 26. Test Results of Inductor Short Condition

9. Performance of Evaluation Board

9.1. Power Factor at Rated Load Condition

Figure 27 shows the system PF performance for the entire input voltage range (90V to 265V) at different input frequency conditions (47Hz, 64Hz). The PF slightly changes according to the input frequency but can achieve over 86% at 265V_{AC} condition.

Figure 27. Power Factor

Table 3. PF Test Results

Input Voltage		Power Factor
90V _{AC}	47Hz	96.31
	64Hz	97.34
110V _{AC}	47Hz	96.72
	64Hz	96.89
180V _{AC}	47Hz	94.41
	64Hz	93.74
220V _{AC}	47Hz	92.49
	64Hz	91.09
265V _{AC}	47Hz	89.71
	64Hz	86.56

9.2. System Efficiency

Figure 28 shows system efficiency results for different AC input voltage frequency conditions. As shown, the input frequency has negligible effect on system efficiency.

Figure 28. System Efficiency

Table 4. Efficiency Test Results

Input Voltage	Frequency	Efficiency (%)
90V _{AC}	47Hz	83.56
	64Hz	83.83
110V _{AC}	47Hz	83.36
	64Hz	83.46
180V _{AC}	47Hz	80.04
	64Hz	80.06
220V _{AC}	47Hz	77.68
	64Hz	77.69
265V _{AC}	47Hz	75.11
	64Hz	75.22

9.3. THD Performance

Figure 29 shows the THD performance at different input frequencies. Test results are quite similar, except the 90V_{AC} condition, but meets international regulations (under 30%).

Figure 29. THD Performance

Table 5. THD Test Results

Input Voltage	Frequency	THD (%)
90V _{AC}	47Hz	20.99
	64Hz	21.82
110V _{AC}	47Hz	22.26
	64Hz	22.46
180V _{AC}	47Hz	24.96
	64Hz	25.31
220V _{AC}	47Hz	25.50
	64Hz	25.84
265V _{AC}	47Hz	25.75
	64Hz	26.72

9.4. Thermal Performance

Figure 30 through Figure 37 show the steady-state thermal results with different input voltage conditions. Inductor L3 has the highest temperature on the top side of the PCB due to copper resistance. The FL7701 has the highest temperature on the bottom side of the PCB due to power loss associated with the high-voltage device. The IC temperature is 66.5°C for the 220V_{AC} input condition.

Table 6. Temperature performance by Input voltage

Input Voltage	T _{IC}	T _{MOSFET}	T _{INDUCTOR}
90V _{AC}	47.6°C	46.2°C	47.8°C
110V _{AC}	51.4°C	46.9°C	47.8°C
220V _{AC}	66.5°C	55.0°C	54.6°C
265V _{AC}	71.5°C	59.5°C	57.7°C

9.5. EMI Results

EMI test measurements were conducted in observance of CISPR22 criteria, which has tighter stricter limits than CISPR15 for lighting applications.

10. Revision History

Rev.	Date	Description
0.0.1	2011.11.16	First issue
1.0.1	2011.11.30	Update IC temperature
1.0.2	2012.2.20	Modified, edited, formatted document. Changed User Guide number from FEB_L030 to FEBFL7701_L30U003A

WARNING AND DISCLAIMER

Replace components on the Evaluation Board only with those parts shown on the parts list (or Bill of Materials) in the Users' Guide. Contact an authorized Fairchild representative with any questions.

This board is intended to be used by certified professionals, in a lab environment, following proper safety procedures. Use at your own risk. The Evaluation board (or kit) is for demonstration purposes only and neither the Board nor this User's Guide constitute a sales contract or create any kind of warranty, whether express or implied, as to the applications or products involved. Fairchild warrants that its products meet Fairchild's published specifications, but does not guarantee that its products work in any specific application. Fairchild reserves the right to make changes without notice to any products described herein to improve reliability, function, or design. Either the applicable sales contract signed by Fairchild and Buyer or, if no contract exists, Fairchild's standard Terms and Conditions on the back of Fairchild invoices, govern the terms of sale of the products described herein.

DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

- Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, or (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in significant injury to the user.
- A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

EXPORT COMPLIANCE STATEMENT

These commodities, technology, or software were exported from the United States in accordance with the Export Administration Regulations for the ultimate destination listed on the commercial invoice. Diversion contrary to U.S. law is prohibited.

U.S. origin products and products made with U.S. origin technology are subject to U.S. Re-export laws. In the event of re-export, the user will be responsible to ensure the appropriate U.S. export regulations are followed.
